A black spiral binding is visible along the left edge of the slide.

## CS 1: Social Issues part II

### Social Context of computing

### Internationalization and more

# Ascii and Character Sets

- American Standard Code for Information Interchange
  - original universal character set for computing
  - developed in early 1960s
  - mandated for all computers sold in US by Johnson in 1968
  - remained dominant till mid-1990s
  - 7-bit character set
    - 127 total characters possible
    - see printed chart of ascii characters

# Ascii and the world

- US was largest consumer of computers in world in 1960s-1980s.
  - ASCII on all of them
  - many seminal programming languages developed in that time
  - what is the side effect?

# Ascii and the world

- US was largest consumer of computers in world in 1960s-1980s.
  - ASCII on all of them
  - many seminal programming languages developed in that time
  - what is the side effect?
    - English became the de facto language for programming for a long time.
    - and for computer use
  - issues?

# Computing and culture

- Today
  - unicode (UTF-8) is standard
    - superset of ASCII with 32,767 possible characters.
    - nearly all of worlds languages have characters represented.
  - localization an important feature in program development
  - issues here?
    - Coke
      - Coca-Cola name in China was first read as "Kekoukela", meaning "Bite the Wax Tadpole" or "Female Horse Stuffed with Wax", depending on the dialect.

# Computing and culture II

- Cultural issues – apply to computing as well as other business.
- Gerber baby food sold in USA
  - same bottles taken to Africa, effect?
- Laundry detergent commercial example on board.
- Also happens in CS domain (not just in software)
  - Our Logo looks like underwear
  - <https://blog.rjmetrics.com/2013/10/09/our-logo-looks-like-underpants-a-case-study-in-internationalization/>

- Not original ad,
- “The premise of these images was simple: In the first frame, a frowning woman holds up a dirty shirt. The second frame shows her placing this shirt into a washing machine and loading it with Tide detergent. Finally, in the third frame she cheerfully holds up the now-clean shirt.”
  - Ref:  
<https://www.altalang.com/beyond-words/ad-translation-when-good-campaigns-go-bad/>

# International issues and computing

- <http://www.google.com/governmentrequests/>
  - government info requests.
- US cryptography export laws
- Ebay: France/Germany.
- Europe's 'Right to be forgotten'
- great firewall of china.
- Is this the way the US government works?
- [http://www.syracuse.com/news/index.ssf/2014/10/governments\\_fake\\_facebook\\_page\\_rips\\_off\\_watertown\\_womans\\_identity.html](http://www.syracuse.com/news/index.ssf/2014/10/governments_fake_facebook_page_rips_off_watertown_womans_identity.html)
- Outcome:

# Facebook, Google and Privacy

- Lets pick a site and look at it
  - How does facebook track you?
  - Are you ok with it?
- How about google?

# And while we are on the topic of phones

- Michigan police have a software/hardware system to slurp all data off of a phone in  $< 2$  minutes
  - Bought for terror but used in everyday cases
  - Police get warrants for suspect
  - But tech pulls all data in range
  - <http://www.detroitnews.com/story/news/local/michigan/2015/10/22/stingray/74438668/>
  - Apparently some local departments in MA have these too
    - <https://www.aclu.org/map/stingray-tracking-devices-whos-got-them>
    -

# Wearable computing

- Early wearable computing
  - circa 1995

# Wearable Today

Cicret Bracelet  
**MAKE YOUR SKIN  
YOUR NEW TOUCH SCREEN**

The next step of the  
wearable technology.

<http://www.digitaljournal.com/>

what does this mean?

# Wearable in the near future

- Some of this is still in prototype

# Next

- What is next for human computer interaction?
  - The next step past wearable?

# The next step

- This is now:
- <https://www.youtube.com/watch?v=833F0030800>

# Or even

- Kyoto brain controlled third arm:
  - <https://www.thetimes.co.uk/article/kyoto-scientists-devise-mind-controlled-arms-for-multitasking-9qg7w9gwg>

# And now we are implanting them

- Chips implanted in employees at Stockholm office center
  - <http://www.ibtimes.co.uk/stockholm-office-workers-epicenter-implanted-microchips-pay-their-lunch-1486045>
- Filmmaker who lost eye replaces it with camera
  - <http://eyeborgproject.tv/>
- Brain implanted thought to speech
  - <https://www.bbc.com/news/health-48037592>
  -

# The next step

- Ethical questions:
  - What should we do when mechanical/computer parts are better?
  - Sports implications
  - Job implications?

# Computers in The workplace

- In workplace
  - Employer owns
    - Computer
    - Network
    - Software licenses
  - They can set the rules
    - Can read any employee email
    - Can monitor employee computing
  - Upheld by court decision.
  - Read and live by acceptable use policies.

# AI and Training Data

- Most AI from the last 10-15 years
  - Take a bunch of “training data”
  - Do some statistical/math processing to find patterns
  - Use that to predict appropriate response to new situations
  - What could possibly go wrong!?!?!?

# AI and Training Data

- Most AI from the last 10-15 years
  - Take a bunch of “training data”
  - Do some statistical/math processing to find patterns
  - Use that to predict appropriate response to new situations
  - What could possibly go wrong!?!?!?

# Example: 2010's era chatbot

- Microsoft wanted to make a bot to connect with young (18-24) people.
  - Made bot to converse with said people on internet mainly twitter
  - AI had no/few preconceptions and was to learn everything by interacting.
  - What could possibly go wrong?
  - ?

# Example: 2010's era chatbot

- Microsoft wanted to make a bot to connect with young (18-24) people.
  - Made bot to converse with said people on internet mainly twitter
  - AI had no/few preconceptions and was to learn everything by interacting.
  - What could possibly go wrong?
  - Well – have you visited the Internet??
  - <https://www.theverge.com/2016/3/24/11297050/tay-microsoft-chatbot-racist>
  - And there were far worse than on that page

Let's end this topic here
